Letter of Recommendation

I was glad when I got to know that Prachi wants to pursue higher studies and happily recommend Ms. Prachi Kunjir for the MS program in BAIS at your university. I am Assistant Professor in Computer Engineering Department at Modern College of Engineering under Pune University. I got to know Prachi better in her 3rd year when I was teaching Artificial Intelligence course. Our interaction has been close, and I found Prachi to be a self-motivated person with a strong urge of learning.

I have seen Prachi doing great work in class. She has a strong grasping power and can well understand the subject. She is curious to learn and interested in practical applications. Since the very first class she has been bold and confident who can present/deliver a topic very well to class. She has also helped other professors with being a good teaching assistance.

I was also her project mentor for her final year project 'Enhancing cosmetic products quality using MRF and K-Means'. She along with her teammates built a system which took reviews of authentic customers and separated them according to the defined features. Separating positive and negative reviews, this system provided statistical details and analysis of the business which also helped to enhance the product's quality. I have seen Prachi working collaboratively and with co-ordination with her teammates. She can adapt and does not fear to try till the product is successfully working. I observed that she is adept at problem-solving and is equipped with sound technical skills. I would gladly agree that Prachi lived up to my expectation and was a keen and an ideal apprentice. I am impressed by her skill and aptitude for writing concise and efficient programs. Moreover, she always sought my guidance on clarifying doubts related to projects. They later published 2 papers; *Survey on Opinion Mining in IJSRD-Vol 6, Issue 01, 2018/ISSN2321-0613* and *'Enhancing Cosmetic Products' Quality Using MRF and K-Means in IJIRCCE-Vol 6, Issue 05, May 2018/ISSN2320-9801*.

Even under stress I have seen her good management of tasks and deadlines. I was her seminar mentor too and seeing her flawless presentation, I asked her to help other students to improve theirs. She is well-mannered, disciplined and respects others. Along with academics, she has also volunteered for other events and maintained good balance between studies and extracurricular activities.

Prachi is keen on pursuing a master's degree in BAIS and she will surely make the best possible use of the opportunities provided by this graduate program. I would strongly recommend her for the master's program at your university. I convey my best wishes for her higher studies and future endeavours.

Yours Sincerely,

28/12/2019

Mr. Sujit N. Deshpande,
Assistant Professor
Department of Computer Engineering,
PES, Modern College of Engineering, Pune, India
